

Managing Director's Statement of Environmental and Energy Policy

We believe in operating a public transport service that is committed to meeting our passengers' current and future needs in an environmentally responsible way.

Through innovation we will drive continual environmental and energy performance improvement. We will work with our employees, industry partners, contractors and suppliers to encourage positive changes.

We will operate our business to prevent pollution. We will comply with legislative requirements and our commitments relating to environment and energy use, consumption and efficiency.

We will set ourselves challenging objectives and targets and monitor progress through robust measurement and reporting of performance. Our management system approach will allow access to the right information and sufficient resources to enable delivery against our objectives and achievement of our targets.

To create a business culture where energy is seen as a valuable resource, we will support the purchase of energy efficient products, and services along with designing solutions that drive energy performance improvements.

Southeastern is committed to being an environmentally responsible company.

We will review this Policy annually or in the event of changing circumstances such as legislative or organisational changes to ensure it remains aligned with our vision.

David Statham

Managing Director
